

## Pre-Appointment Screening: COVID-19

To lessen the administrative burden of the COVID-19 pandemic, automate pre-appointment screening through a digital survey that is deployed to patients with upcoming in-person appointments. The COVID screening survey asks patients about possible recent exposure to COVID-19, recent COVID-19 test activity, and potential symptoms to ensure safety of patients and staff in the clinic.

### Safely deliver cancer care with pre-screening

Before entering the clinic, practices are ensuring that patients have not been exposed to COVID-19 and also they are not experiencing symptoms of the virus

### QUICKLY AND EFFICIENTLY EVALUATE PATIENTS

- » Automate pre-appointment survey
- » Proactively address COVID-19 exposure
- » Integrate into workflow to notify care team
- » Provide intervention for exposed patients before they arrive at the clinic

Leverage technology to face new challenges for cancer care providers

#### Automated process

Screen patients before in-clinic appointments for COVID exposure

#### Flexible delivery

Deliver the survey via SMS text message or email

#### Proactive intervention

If COVID exposure is indicated, clinic can contact patient

#### Integrated workflow

Responses and reporting captured by Navigating Care
